FREIGHTVISION

Freight Transport FORESIGHT 2050

Funding: European (7th RTD Framework Programme)
Duration: Sep 2008 - Mar 2010
Status: Complete with results
Total project cost: €2,737,916
EU contribution: €1,999,623

Call for proposal: FP7-SST-2007-TREN-1_05June
CORDIS RCN : 90307

Background & policy context:

In the coming years and decades the European Union faces the following challenges in the freight sector:

- the need to ensure and increase economic growth; and
- the need to deal with an increase of freight transport demand;

while at the same time:

- reducing environmental emissions (mainly CO2);
- reducing dependency on fossil energy;
- reducing accidents; and
- avoiding congestion and other negative impacts on the environment and population.

Many different stakeholder groups have created their proposals to achieve sustainable freight transport. Most of them address only part of the problem or focus on only one aspect of a solution. Following these advices leads to sub optimisation and less efficient solutions. A holistic approach is needed integrating all aspects of the problem (infrastructure, vehicles, fuels, interoperability etc) and all types of criteria in the solution (research, technologies, policies and pricing).

Objectives:

The FREIGHTVISION project aimed to develop a long-term vision and a robust and adaptive action plan both for transport and technology policy for sustainable long-distance freight transport, which are supported as much as possible by the relevant stakeholders.

In order to develop a vision and an action plan the following tasks were performed:

- analysing transport policy, technology development, and mega trends with regard to long-distance freight transport;
- integrating them into forecasts;
- developing scenarios how to reach a desirable future; and
- defining for this the vision and action plan.

Methodology:

A 'Foresight' process was implemented to achieve stakeholders' support for the vision and action plan. For this purpose four FREIGHTVISION Forums allowed the active involvement of representatives from the Advisory Councils, ERANET (Transport and Road), ministries, infrastructure operators, industries and other stakeholders. The aim of the forums was to reach a common understanding about shaping the future and getting a maximum legitimacy for both the scenarios, the vision and action plan developed.

Parent Programmes:
FP7-TRANSPORT - Transport (Including Aeronautics) - Horizontal activities for implementation of the transport programme (TPT)

Institute type: Public institution
Institute name: The European Commission
Funding type: Public (EU)

Lead Organisation:

Austriatech - Gesellschaft D. Bundes F. Technologiepolit. Massnahmen

Address:
Donau-City-Straße 1

**Key Results:**

The main project result is the FREIGHTVISION Action Plan. This Action Plan provided recommendations in which way a sustainable European long-distance freight transport system could be reached until 2050. These recommendations were based on the discussion and evaluation of the 35 measures presented at the 3rd Forum Meeting.

For each measures, a proposal of concrete actions and milestones have been developed. These individual action plans have been combined into a single FREIGHTVISION Action Plan.

**Innovation aspects**

The FREIGHTVISION Action Plan is a combination of RTD and Transport Policy Actions. The Action Plan's intention is to provide policy recommendations on how the 2050 vision can be reached. Two different starting points have been taken for developing this Action Plan:

- the project team applied the traditional approach of defining a list of measures and trying to make the best out of these measures. This approach reflects traditional policy making and is very much oriented towards current political interest groups;
- in another approach, sometimes referred to as back-casting, the project team analysed which changes are needed to reach the 2050 vision. This approach ignores current stakeholder interests.

When these two approaches are integrated, discrepancies become apparent, as some of the traditional focus points become less important. Two examples for this paradigm shift are the introduction of GigaLiners and Modal Shift to rail. Both of these topics are high on the political agenda, due to strong interest groups. But both of them have very limited impact on reaching the 2050 vision.

**Policy implications**
At the Forum Meeting the following (35) topics have been discussed, after which accompanying policy actions have been formulated:

1. Investment in ITS
2. Investment in road infrastructure
3. Internalisation of external costs
4. HGV weights and dimensions
5. Liberalisation of cabotage
6. Progressive distance pricing
7. Different pricing with regards to freight
8. Harmonised speed limits
9. Congestion charge (CC)
10. Enforcement of regulations
11. Investment in new railway lines
12. Freight priorisation
13. Funding for ERTMS
14. Electrification of rail corridors
15. Longer trains
16. Heavier trains
17. Investment in IWT infrastructure
18. Develop new technologies in IWT
19. Investment in maritime port infrastructure
20. Training for ecodriving
21. Automated platooning
22. Standardised loading units
23. E-Freight
24. Network optimisation: cargo owner
25. Network optimisation: logistics service provider
26. CO2 labels
27. Intermodal transport
28. Transport consolidation and cooperation
29. Transport route planning and control
30. Taxation of fossil fuels
31. Hydrogen infrastructure
32. Improved Batteries
33. Including CO2 standards in HGV regulations (EURO standards)
34. BAT vehicle certification for HGV
35. Clean vehicle technologies

Other results

With respect to road freight transport: Member States are entitled to allow longer and/or heavier vehicles (measuring up to 25.25 meters and/or weighing up to 60 tonnes) to circulate in their country, provided that this does not affect international competition. International transits are not allowed.

A few countries make use of this possibility. Some countries are undertaking tests or are planning to do so. However, various countries (i.e. Germany, Austria and UK) have said ‘no’ to the longer and/or heavier vehicles (LHV). In their view these vehicles produce a lot of CO2, form a threat to the competitive position of the rail sector and/or have a negative influence on road safety. Furthermore, it is expected that 60 tonnes vehicles will also require investments in the current road infrastructure.

Because the Member States have different views, the EC tends to focus on the impact of three alternatives: longer, heavier, longer and heavier.

Strategy targets

- An efficient and integrated mobility system: a Single European Transport Area
- Innovating for the future (technology and behaviour): Promoting more sustainable development

Readiness

With respect to road freight transport: the concept of LHV (longer and/or heavier vehicles) cannot be implemented, due to a variety of views by Member States.

Member States are entitled to allow longer and/or heavier vehicles (measuring up to 25.25 meters and/or weighing up to 60 tonnes) to circulate in their country, provided that this does not affect international competition. International transits are not allowed.

A few countries make use of this possibility, some are undertaking tests or are planning to do so.
